

# 1 System.Security.Permissions.SecurityAttribute Class

2  
3  
4

```
5 [ILASM]  
6 .class public abstract serializable SecurityAttribute  
7 extends System.Attribute  
  
8 [C#]  
9 public abstract class SecurityAttribute: Attribute
```

## 10 Assembly Info:

- 11 • Name: mscorlib
- 12 • Public Key: [00 00 00 00 00 00 00 00 04 00 00 00 00 00 00]
- 13 • Version: 1.0.x.x
- 14 • Attributes:
  - 15 ○ CLSCompliantAttribute(true)

## 16 Type Attributes:

- 17 • AttributeUsageAttribute(AttributeTargets.Assembly | AttributeTargets.Class |  
18 AttributeTargets.Struct | AttributeTargets.Constructor |  
19 AttributeTargets.Method, AllowMultiple=true, Inherited=false)

## 20 Summary

21

22 This is the base class for attributes used by the security system.

## 23 Inherits From: System.Attribute

24

25 Library: BCL

26

27 **Thread Safety:** All public static members of this type are safe for multithreaded  
28 operations. No instance members are guaranteed to be thread safe.

29

30

31

# 1 SecurityAttribute() Constructor

2 [ILASM]  
3 family specialname instance void .ctor()

4 [C#]  
5 protected SecurityAttribute()

## 6 Summary

7 Constructs a new instance of the  
8 **System.Security.Permissions.SecurityAttribute** class.

9

# 1 SecurityAttribute(System.Security.Permissions.SecurityAction) Constructor

```
3 [ILASM]  
4 public rtspecialname specialname instance void  
5 .ctor(valuetype System.Security.Permissions.SecurityAction  
6 action)  
7  
8 [C#]  
9 public SecurityAttribute(SecurityAction action)
```

## 9 Summary

10 Constructs and initializes a new instance of  
11 **System.Security.Permissions.SecurityAttribute** with the specified  
12 **System.Security.Permissions.SecurityAction**.

## 13 Parameters

Parameter	Description
<i>action</i>	A <b>System.Security.Permissions.SecurityAction</b> value.

## 16 Exceptions

Exception	Condition
<b>System.ArgumentException</b>	<i>action</i> is not a valid <b>System.Security.Permissions.SecurityAction</b> value.

20  
21  
22

# 1 SecurityAttribute.CreatePermission() 2 Method

```
3 [ILASM]  
4 .method public hidebysig virtual abstract class  
5 System.Security.IPermission CreatePermission()  
  
6 [C#]  
7 public abstract IPermission CreatePermission()
```

## 8 Summary

9 Returns a **System.Security.IPermission** object that contains the  
10 security information of the current instance.

## 11 Return Value

12

13 A **System.Security.IPermission** object.

## 14 Behaviors

15 Returns an instance of the permission type that corresponds to the  
16 current attribute. The returned object contains the security information  
17 of the current attribute.

## 18 How and When to Override

19 Override this method to create an instance of the permission type that  
20 corresponds to the current attribute. For example, the  
21 **CreatePermission** implementation of  
22 **System.Security.Permissions.SecurityPermissionAttribute**  
23 creates an instance of the  
24 **System.Security.Permissions.SecurityPermission** class.

## 25 Usage

26 Security information specified using attributes is stored in metadata.  
27 The security information in the metadata is created using the  
28 permission object returned by this method.

29

# 1 SecurityAttribute.Unrestricted Property

```
2 [ILASM]
3 .property bool Unrestricted { public hidebysig specialname
4 instance bool get_Unrestricted() public hidebysig
5 specialname instance void set_Unrestricted(bool value) }
6
7 [C#]
8 public bool Unrestricted { get; set; }
```

## 8 Summary

9 Gets or sets full (unrestricted) permission to the resource protected by  
10 the current instance.

## 11 Property Value

12

13 **true** if full access to the protected resource is declared or is being set;  
14 otherwise, **false**.

15
