```
[ILASM]  
.class public serializable ParameterInfo extends  
System.Object  
  
[C#]  
public class ParameterInfo
```

Assembly Info:

- *Name:* mscorlib
- *Public Key:* [00 00 00 00 00 00 00 00 04 00 00 00 00 00 00]
- *Version:* 1.0.x.x
- *Attributes:*
 - CLSCompliantAttribute(true)

Summary

Provides access to parameter metadata.

Inherits From: System.Object

Library: Reflection

Thread Safety: This type is safe for multithreaded operations.

1 ParameterInfo() Constructor

```
2 [ILASM]  
3 family rtspecialname specialname instance void .ctor()  
4 [C#]  
5 protected ParameterInfo()
```

6 Summary

7 Constructs a new instance of the **System.Reflection.ParameterInfo**
8 class.

9 Description

10 This constructor is called only by classes that derive from
11 **ParameterInfo**.

12

1 ParameterInfo.Attributes Property

```
2 [ILASM]  
3 .property valuetype System.Reflection.ParameterAttributes  
4 Attributes { public hidebysig virtual specialname valuetype  
5 System.Reflection.ParameterAttributes get_Attributes() }  
6 [C#]  
7 public virtual ParameterAttributes Attributes { get; }
```

8 Summary

9 Gets the attributes of the parameter reflected by the current instance.

10 Property Value

11

12 A **System.Reflection.ParameterAttributes** value representing the
13 attributes for the parameter reflected by the current instance.

14 Behaviors

15 This property is read-only.

16

1 ParameterInfo.Name Property

```
2 [ILASM]
3 .property string Name { public hidebysig virtual
4 specialname string get_Name() }
5 [C#]
6 public virtual string Name { get; }
```

7 Summary

8 Gets the name of the parameter reflected by the current instance.

9 Property Value

10

11 A **System.String** that contains the name of the parameter reflected
12 by the current instance.

13 Description

14 This property returns the name of the parameter reflected by the
15 current instance as that name is declared in the signature of the
16 method that contains the parameter. [*Note:* For example, if a method
17 signature is `void MyMethod(object MyParm)`, the
18 **System.Reflection.ParameterInfo.Name** property value would be
19 "MyParm".]

20 Behaviors

21 This property is read-only.

22

1 ParameterInfo.ParameterType Property

```
2 [ILASM]
3 .property class System.Type ParameterType { public
4 hidebysig virtual specialname class System.Type
5 get_ParameterType() }
6
7 [C#]
8 public virtual Type ParameterType { get; }
```

8 Summary

9 Gets the type of the parameter reflected by the current instance.

10 Property Value

11

12 The **System.Type** of the parameter reflected by the current instance.

13 Description

14 This property returns the type declared for the property. [*Note:* For
15 example, if a method signature is `void MyMethod(object MyParm)`,
16 the **System.Reflection.ParameterInfo.ParameterType** property
17 value would be a **System.Type** object representing the
18 **System.Object** type.]

19 Behaviors

20 This property is read-only.
