

System.FlagsAttribute Class

```
[ILASM]
.class public serializable FlagsAttribute extends
System.Attribute

[C#]
public class FlagsAttribute: Attribute
```

Assembly Info:

- *Name:* mscorlib
- *Public Key:* [00 00 00 00 00 00 00 00 04 00 00 00 00 00 00]
- *Version:* 1.0.x.x
- *Attributes:*
 - CLSCompliantAttribute(true)

Type Attributes:

- AttributeUsageAttribute(AttributeTargets.Enum, AllowMultiple=false, Inherited=false)

Summary

Indicates that the **System.Enum** targeted by the current attribute is declared as a bit-field.

Inherits From: System.Attribute

Library: BCL

Thread Safety: All public static members of this type are safe for multithreaded operations. No instance members are guaranteed to be thread safe.

Description

The **System.FlagsAttribute** class provides the consumer of a **System.Enum** the information that the enumeration is to be used as a bit-field. Additionally, when formatting a **System.Enum**, using the **System.FlagsAttribute** causes a value that is a bitwise OR combination of multiple fields to print correctly.

[*Note:* Bit-fields are generally used for lists of elements that might occur in combination; whereas enumeration constants are generally used for lists of mutually exclusive elements. Therefore, bit-fields are designed to be combined with the bitwise OR operator to generate unnamed values, whereas enumerated constants are not. Languages vary in their usage of bit-fields compared to enumeration constants.

1
2 This attribute can only be applied to enumerations.]

3 Example

4

5 The following example demonstrates the use of
6 **System.FlagsAttribute** on the formatting of a **System.Enum**. With
7 this attribute, the *Position* enumeration is used as a bit-field, and the
8 value 3 (Top | Left) is considered a valid value for the enumeration
9 when formatting. Without this attribute, the enumeration *Color* is not
10 used as a bit-field, and the value 3 (Red | Blue) is not considered a
11 valid value for the enumeration when formatting.

12

13

[C#]

14

15

```
using System;
```

16

```
[FlagsAttribute()]
```

17

```
public enum Position {
```

18

```
    Top = 0x1,
```

19

```
    Left = 0x2,
```

20

```
    Bottom = 0x4,
```

21

```
    Right = 0x8
```

22

```
}
```

23

24

```
//enum Color declared without FlagsAttribute
```

25

```
public enum Color {
```

26

```
    Red = 0x1,
```

27

```
    Blue = 0x2,
```

28

```
    Yellow = 0x4
```

29

30

```
}
```

31

32

```
public class enumFormat {
```

33

34

```
    public static void Main() {
```

35

```
        Position p = Position.Top | Position.Left;
```

36

```
        Console.WriteLine("Position: {0}", p);
```

37

```
        Color c = Color.Red | Color.Blue;
```

38

```
        Console.WriteLine("Color: {0}", c);
```

39

40

```
    }
```

41

```
}
```

42

43

44

The output is

45

```
Position: Top, Left
```

46

47

1
2
3
4

Color: 3

1 FlagsAttribute() Constructor

```
2 [ILASM]  
3 public rtspecialname specialname instance void .ctor()  
4 [C#]  
5 public FlagsAttribute()
```

6 Summary

7 Constructs a new instance of the **System.FlagsAttribute** class.

8
