

1 System.Reflection.PropertyInfo Class

```
2 [ILAsm]  
3 .class public abstract serializable PropertyInfo extends  
4 System.Reflection.MemberInfo  
  
5 [C#]  
6 public abstract class PropertyInfo: MemberInfo
```

7 Assembly Info:

- 8 • *Name:* mscorlib
- 9 • *Public Key:* [00 00 00 00 00 00 00 00 04 00 00 00 00 00 00]
- 10 • *Version:* 2.0.x.x
- 11 • *Attributes:*
 - 12 ○ CLSCompliantAttribute(true)

13 Summary

14 Provides access to property metadata.

15 Inherits From: System.Reflection.MemberInfo

16

17 **Library:** Reflection

18

19 **Thread Safety:** This type is safe for multithreaded operations.

20

21 Description

22 A property is a named aspect of an object's state whose value is typically accessible
23 through `Get` and `Set` accessors. [*Note:* Properties can be read-only, in which case the
24 `Set` accessor is not available.]

25

26

27

28 Several methods in this class assume that the `Get` and `Set` accessors of a property have
29 certain formats. The signatures of the accessors are required to match the following
30 conventions:

- 31 • The return type of the `Get` accessor and the last argument of the `Set` accessor are
32 required to be identical to the type of the property reflected by the current instance.
- 33 • The `Get` and `Set` accessors are required to have the same number, type, and order
34 of indices.

35 If this format is not followed, the behavior of the
36 `System.Reflection.PropertyInfo.GetValue` and
37 `System.Reflection.PropertyInfo.SetValue` methods is undefined.

38

1 PropertyInfo() Constructor

```
2 [ILAsm]  
3 family rtspecialname specialname instance void .ctor()  
4 [C#]  
5 protected PropertyInfo()
```

6 Summary

7 Constructs a new instance of the `System.Reflection.PropertyInfo` class.

8

1 PropertyInfo.GetAccessors(System.Boolean) 2 Method

```
3 [ILAsm]  
4 .method public hidebysig virtual abstract class  
5 System.Reflection.MethodInfo[] GetAccessors(bool nonPublic)  
  
6 [C#]  
7 public abstract MethodInfo[] GetAccessors(bool nonPublic)
```

8 Summary

9 Returns an array whose elements reflect the public and, if specified, non-public Get,
10 Set, and other accessors of the property reflected by the current instance.

11 Parameters

| Parameter | Description |
|------------------|--|
| <i>nonPublic</i> | A <code>System.Boolean</code> value that indicates whether non-public accessors will be included in the return value. Specify <code>true</code> to include the non-public accessors; otherwise, specify <code>false</code> . |

12 13 Return Value

14 An array of `System.Reflection.MethodInfo` objects whose elements reflect the Get,
15 Set, and other accessors of the property reflected by the current instance. If *nonPublic*
16 is `true`, this array contains public and non-public accessors. If *nonPublic* is `false`, this
17 array contains only public accessors. If no accessors with the specified visibility are
18 found, returns an array with zero elements.

19 Behaviors

20 As described above.

21 22 Permissions

| Permission | Description |
|---|---|
| System.Security.Permissions.ReflectionPermission | Requires permission to reflect non-public members of a type in loaded assemblies. See <code>System.Security.Permissions.ReflectionPermissionFlag.TypeInformation</code> . |

1

2

1 PropertyInfo.GetAccessors() Method

```
2 [ILAsm]  
3 .method public hidebysig instance class System.Reflection.MethodInfo[]  
4 GetAccessors()  
  
5 [C#]  
6 public MethodInfo[] GetAccessors()
```

7 Summary

8 Returns an array whose elements reflect the public Get, Set, and other accessors of the
9 property reflected by the current instance.

10 Return Value

11 An array of `System.Reflection.MethodInfo` objects that reflect the public Get, Set,
12 and other accessors of the property reflected by the current instance, if found;
13 otherwise, returns an array with zero elements.

14 Description

15 This method is equivalent to `System.Reflection.PropertyInfo.GetAccessors(false)`.

16

1 PropertyInfo.GetGetMethod(System.Boolean) 2 Method

```
3 [ILAsm]  
4 .method public hidebysig virtual abstract class  
5 System.Reflection.MethodInfo GetGetMethod(bool nonPublic)  
  
6 [C#]  
7 public abstract MethodInfo GetGetMethod(bool nonPublic)
```

8 Summary

9 Returns the public possibly or, if specified, the non-public Get accessor for the property
10 reflected by the current instance.

11 Parameters

| Parameter | Description |
|------------------|--|
| <i>nonPublic</i> | A <code>System.Boolean</code> value that indicates whether a non-public Get accessor will be returned. Specify <code>true</code> to allow a non-public accessor; otherwise, specify <code>false</code> . |

12 13 Return Value

14 If *nonPublic* is `true`, returns a `System.Reflection.MethodInfo` instance that reflects
15 the Get accessor for the property reflected by the current instance if that accessor
16 exists. If *nonPublic* is `false` and the Get accessor is non-public, or *nonPublic* is `true` but
17 no Get accessor exists for the property reflected by the current instance, returns `null`.

18 Behaviors

19 As described above.

20

21 Exceptions

| Exception | Condition |
|-------------------------------------|---|
| System.MethodAccessException | <i>nonPublic</i> is <code>true</code> , the Get accessor for the property reflected by the current instance is non-public, and the caller does not have <code>System.Security.Permissions.ReflectionPermission</code> to reflect on non-public methods. |

1

2 **Permissions**

| Permission | Description |
|---|---|
| System.Security.Permissions.ReflectionPermission | Requires permission to reflect non-public members of a type in loaded assemblies. See <code>System.Security.Permissions.ReflectionPermissionFlag.TypeInformation</code> . |

3

4

1 PropertyInfo.GetGetMethod() Method

```
2 [ILAsm]  
3 .method public hidebysig instance class System.Reflection.MethodInfo  
4 GetGetMethod()  
5 [C#]  
6 public MethodInfo GetGetMethod()
```

7 Summary

8 Returns the public Get accessor for the property reflected by the current instance.

9 Return Value

10 A System.Reflection.MethodInfo instance that reflects the public Get accessor for the
11 property reflected by the current instance. Returns null if no public Get accessor exists.

12

1 PropertyInfo.GetIndexParameters() Method

```
2 [ILAsm]  
3 .method public hidebysig virtual abstract class  
4 System.Reflection.ParameterInfo[] GetIndexParameters()  
  
5 [C#]  
6 public abstract ParameterInfo[] GetIndexParameters()
```

7 Summary

8 Returns an array of the indexers of the property reflected by the current instance.

9 Return Value

10 An array of `System.Reflection.ParameterInfo` objects that reflect the indexers of the
11 property reflected by the current instance. If no indexers exist for the property reflected
12 by the current instance, returns an array with zero elements.

13 Behaviors

14 As described above.

15

16 Exceptions

| Exception | Condition |
|-------------------------------------|--|
| System.MethodAccessException | The property reflected by the current instance is visible, but its Get and Set accessors are not, and the caller does not have <code>System.Security.Permissions.ReflectionPermission</code> . |

17

18 Permissions

| Permission | Description |
|---|---|
| System.Security.Permissions.ReflectionPermission | Requires permission to reflect non-public members of a type in loaded assemblies. See <code>System.Security.Permissions.ReflectionPermissionFlag.TypeInformation</code> . |

19

20

1 PropertyInfo.GetSetMethod(System.Boolean) 2 Method

```
3 [ILAsm]  
4 .method public hidebysig virtual abstract class  
5 System.Reflection.MethodInfo GetSetMethod(bool nonPublic)  
  
6 [C#]  
7 public abstract MethodInfo GetSetMethod(bool nonPublic)
```

8 Summary

9 Returns the public possibly or, if specified, the non-public set accessor for the property
10 reflected by the current instance.

11 Parameters

| Parameter | Description |
|------------------|--|
| <i>nonPublic</i> | A <code>System.Boolean</code> value that indicates whether a non-public set accessor will be returned. Specify <code>true</code> to allow a non-public accessor; otherwise, specify <code>false</code> . |

12

13 Return Value

14 If *nonPublic* is `true`, returns a `System.Reflection.MethodInfo` instance that reflects
15 the set accessor for the property reflected by the current instance if that accessor
16 exists. If *nonPublic* is `false` and the set accessor is non-public, or *nonPublic* is `true` but
17 no set accessor exists for the property reflected by the current instance, returns `null`.

18 Behaviors

19 As described above.

20

21 Exceptions

| Exception | Condition |
|-------------------------------------|---|
| System.MethodAccessException | <i>nonPublic</i> is <code>true</code> , the set accessor for the property reflected by the current instance is non-public, and the caller does not have <code>System.Security.Permissions.ReflectionPermission</code> to reflect on non-public methods. |

1

2 **Permissions**

| Permission | Description |
|---|---|
| System.Security.Permissions.ReflectionPermission | Requires permission to reflect non-public members of a type in loaded assemblies. See <code>System.Security.Permissions.ReflectionPermissionFlag.TypeInformation</code> . |

3

4

1 PropertyInfo.GetSetMethod() Method

```
2 [ILAsm]  
3 .method public hidebysig instance class System.Reflection.MethodInfo  
4 GetSetMethod()  
5 [C#]  
6 public MethodInfo GetSetMethod()
```

7 Summary

8 Returns the public set accessor for the property reflected by the current instance.

9 Return Value

10 A `System.Reflection.MethodInfo` instance that reflects the public set accessor for the
11 property reflected by the current instance. Returns `null` if no public set accessor exists.

12 Description

13 This method is equivalent to `System.Reflection.PropertyInfo.GetSetMethod(false)`.

14

1 PropertyInfo.GetValue(System.Object, 2 System.Reflection.BindingFlags, 3 System.Reflection.Binder, System.Object[], 4 System.Globalization.CultureInfo) Method

```
5 [ILAsm]  
6 .method public hidebysig virtual abstract object GetValue(object obj,  
7 valuetype System.Reflection.BindingFlags invokeAttr, class  
8 System.Reflection.Binder binder, object[] index, class  
9 System.Globalization.CultureInfo culture)
```

```
10 [C#]  
11 public abstract object GetValue(object obj, BindingFlags invokeAttr,  
12 Binder binder, object[] index, CultureInfo culture)
```

13 Summary

14 Returns the value of the property that is reflected by the current instance in the
15 specified object and corresponds to the specified criteria.

16 Parameters

| Parameter | Description |
|-------------------|---|
| <i>obj</i> | The object whose property value is returned. Specify <code>null</code> to invoke a static Get accessor on the property reflected by the current instance. |
| <i>invokeAttr</i> | A <code>System.Reflection.BindingFlags</code> value that controls the binding process. [Note: Specify <code>System.Reflection.BindingFlags.Public</code> or <code>System.Reflection.BindingFlags.NonPublic</code> , and <code>System.Reflection.BindingFlags.Instance</code> or <code>System.Reflection.BindingFlags.Static</code> ; or this method will not invoke any get accessors of the property reflected by the current instance.] |
| <i>binder</i> | A <code>System.Reflection.Binder</code> that enables the binding, coercion of argument types, invocation of members, and retrieval of <code>System.Reflection.MemberInfo</code> objects via reflection. If <i>binder</i> is <code>null</code> , the default binder is used. |
| <i>index</i> | An array of objects that is an index or values for indexed properties. This value is required to be <code>null</code> for non-indexed properties. |
| <i>culture</i> | The only defined value for this parameter is <code>null</code> . |

1

2 Return Value

3 A `System.Object` that contains the property value for *obj*.

4 Behaviors

5 As described above.

6

7 Exceptions

| Exception | Condition |
|--|--|
| System.ArgumentException | <i>index</i> does not contain the exact type of arguments needed. -or- The <code>Get</code> accessor of the property reflected by the current instance was not found. |
| System.MethodAccessException | The <code>Get</code> accessor of the property reflected by the current instance is non-public and the caller does not have <code>System.Security.Permissions.ReflectionPermission</code> to reflect on non-public methods. |
| System.Reflection.TargetException | The property reflected by the current instance is non-static, and <i>obj</i> is null or is of a type that does not implement the property reflected by the current instance. |
| System.Reflection.TargetParameterCountException | The current instance reflects an indexer and <i>index.Length</i> does not equal the rank of the indexer. |

8

9 Permissions

| Permission | Description |
|---|--|
| System.Security.Permissions.ReflectionPermission | Requires permission to reflect non-public members of a type in loaded assemblies. See <code>System.Security.Permissions</code> . |

| | |
|--|--|
| | ReflectionPermissionFlag.MemberAccess. |
|--|--|

1

2

1 PropertyInfo.GetValue(System.Object, 2 System.Object[]) Method

```
3 [ILAsm]  
4 .method public hidebysig virtual object GetValue(object obj, object[]  
5 index)  
6 [C#]  
7 public virtual object GetValue(object obj, object[] index)
```

8 Summary

9 Returns the value of the property reflected by the current instance in the specified
10 object, using the specified index values.

11 Parameters

| Parameter | Description |
|--------------|---|
| <i>obj</i> | The object whose property value will be returned. Specify <code>null</code> to invoke a static <code>Get</code> accessor of a property. |
| <i>index</i> | An array of objects that is an index of values for indexed properties. This value is required to be <code>null</code> for non-indexed properties. |

12

13 Return Value

14 A `System.Object` that contains the property value for *obj*.

15 Behaviors

16 As described above.

17

18 Exceptions

| Exception | Condition |
|---------------------------------|---|
| System.ArgumentException | <i>index</i> does not contain the exact type of arguments needed. -or- The <code>Get</code> accessor of the property reflected by the |

| | |
|--|---|
| | current instance is not found. |
| System.MethodAccessException | The Get accessor of the property reflected by the current instance is non-public and the caller does not have <code>System.Security.Permissions.ReflectionPermission</code> to reflect on non-public methods. |
| System.Reflection.TargetException | The property reflected by the current instance is non-static, and <i>obj</i> is null or is of a type that does not implement the property reflected by the current instance. |
| System.Reflection.TargetParameterCountException | The current instance reflects an indexer and <i>index.Length</i> does not equal the rank of the indexer. |

1

2 Permissions

| Permission | Description |
|---|--|
| System.Security.Permissions.ReflectionPermission | Requires permission to reflect non-public members of a type in loaded assemblies. See <code>System.Security.Permissions.ReflectionPermissionFlag.MemberAccess</code> . |

3

4

1 **PropertyInfo.SetValue(System.Object,**
 2 **System.Object,**
 3 **System.Reflection.BindingFlags,**
 4 **System.Reflection.Binder, System.Object[],**
 5 **System.Globalization.CultureInfo) Method**

```
6 [ILAsm]
7 .method public hidebysig virtual abstract void SetValue(object obj, object
8 value, valuetype System.Reflection.BindingFlags invokeAttr, class
9 System.Reflection.Binder binder, object[] index, class
10 System.Globalization.CultureInfo culture)

11 [C#]
12 public abstract void SetValue(object obj, object value, BindingFlags
13 invokeAttr, Binder binder, object[] index, CultureInfo culture)
```

14 **Summary**

15 Sets the value of the property that is reflected by the current instance on the specified
 16 objects and corresponds to the specified properties.

17 **Parameters**

| Parameter | Description |
|-------------------|---|
| <i>obj</i> | The object whose property value is returned. Specify <code>null</code> to invoke a static set accessor on the property reflected by the current instance. |
| <i>value</i> | A object that contains the new value for the property. |
| <i>invokeAttr</i> | A <code>System.Reflection.BindingFlags</code> value that controls the binding process. [Note: Specify <code>System.Reflection.BindingFlags.Public</code> or <code>System.Reflection.BindingFlags.NonPublic</code> , and <code>System.Reflection.BindingFlags.Instance</code> or <code>System.Reflection.BindingFlags.Static</code> ; otherwise, this method will not invoke any set accessors of the property reflected by the current instance.] |
| <i>binder</i> | A <code>System.Reflection.Binder</code> that enables the binding, coercion of argument types, invocation of members, and retrieval of <code>System.Reflection.MemberInfo</code> objects via reflection. If <i>binder</i> is <code>null</code> , the default binder is used. |
| <i>index</i> | An array of objects that is an index or values for indexed properties. This value is required to be <code>null</code> for non-indexed properties. |

| | |
|----------------|--|
| <i>culture</i> | The only defined value for this parameter is null. |
|----------------|--|

1

2 **Behaviors**

3 As described above.

4

5 **Exceptions**

| Exception | Condition |
|--|--|
| System.ArgumentException | The <i>index</i> array does not contain the exact type of arguments needed. The <i>set</i> accessor of the property reflected by the current instance is not found. |
| System.Reflection.TargetException | The property reflected by the current instance is non-static, and <i>obj</i> is null or is of a type that does not implement the property reflected by the current instance. |
| System.MethodAccessException | The <i>set</i> accessor of the property reflected by the current instance is non-public and the caller does not have <code>System.Security.Permissions.ReflectionPermission</code> to reflect on non-public methods. |
| System.Reflection.TargetParameterCountException | The current instance reflects an indexer and <i>index.Length</i> does not equal the rank of the indexer. |

6

7 **Permissions**

| Permission | Description |
|---|--|
| System.Security.Permissions.ReflectionPermission | Requires permission to reflect non-public members of a type in loaded assemblies. See <code>System.Security.Permissions.ReflectionPermissionFlag.MemberAccess</code> . |

8

9

1 PropertyInfo.SetValue(System.Object, 2 System.Object, System.Object[]) Method

```
3 [ILAsm]  
4 .method public hidebysig virtual void SetValue(object obj, object value,  
5 object[] index)  
  
6 [C#]  
7 public virtual void SetValue(object obj, object value, object[] index)
```

8 Summary

9 Sets the value of the property reflected by the current instance on the specified object,
10 using the specified index values.

11 Parameters

| Parameter | Description |
|--------------|--|
| <i>obj</i> | The object whose property value is returned. Specify <code>null</code> to invoke a static <code>Set</code> accessor on the property reflected by the current instance. |
| <i>value</i> | A object that contains the new value for the property. |
| <i>index</i> | An array of objects that is an index or values for indexed properties. This value is required to be <code>null</code> for non-indexed properties. |

12

13 Behaviors

14 As described above.

15

16 Exceptions

| Exception | Condition |
|---------------------------------|---|
| System.ArgumentException | <i>index</i> does not contain the exact type of arguments needed. -or- The <code>Set</code> accessor of the property reflected by the |

| | |
|--|--|
| | current instance was not found. |
| System.MethodAccessException | The <code>Set</code> accessor of the property reflected by the current instance is non-public and the caller does not have <code>System.Security.Permissions.ReflectionPermission</code> to reflect on non-public methods. |
| System.Reflection.TargetException | The property reflected by the current instance is non-static, and <code>obj</code> is null or is of a type that does not implement the property reflected by the current instance. |
| System.Reflection.TargetParameterCountException | The current instance reflects an indexer and <code>index.Length</code> does not equal the rank of the indexer. |

1

2 **Permissions**

| Permission | Description |
|---|--|
| System.Security.Permissions.ReflectionPermission | Requires permission to reflect non-public members of a type in loaded assemblies. See <code>System.Security.Permissions.ReflectionPermissionFlag.MemberAccess</code> . |

3

4

1 PropertyInfo.Attributes Property

```
2 [ILAsm]  
3 .property valuetype System.Reflection.PropertyAttributes Attributes {  
4 public hidebysig virtual abstract specialname valuetype  
5 System.Reflection.PropertyAttributes get_Attributes() }  
6 [C#]  
7 public abstract PropertyAttributes Attributes { get; }
```

8 Summary

9 Gets the attributes of the property reflected by the current instance.

10 Property Value

11 A `System.Reflection.PropertyAttributes` value that specifies the attributes of the
12 property reflected by the current instance.

13 Behaviors

14 This property is read-only.

15
16 This property gets a `System.Reflection.PropertyAttributes` value that indicates the
17 attributes set in the metadata of the property reflected by the current instance.

18 Usage

19 Use this property to determine if the property reflected by the current instance has a
20 special name or a default value.

21

22

1 PropertyInfo.CanRead Property

```
2 [ILAsm]  
3 .property bool CanRead { public hidebysig virtual abstract specialname  
4 bool get_CanRead() }  
  
5 [C#]  
6 public abstract bool CanRead { get; }
```

7 Summary

8 Gets a `System.Boolean` value indicating whether the property reflected by the current
9 instance has a `Get` accessor.

10 Property Value

11 `true` if the property reflected by the current instance has a `Get` accessor; otherwise,
12 `false`.

13 Behaviors

14 This property is read-only.

15

16

1 PropertyInfo.CanWrite Property

```
2 [ILAsm]  
3 .property bool CanWrite { public hidebysig virtual abstract specialname  
4 bool get_CanWrite() }  
  
5 [C#]  
6 public abstract bool CanWrite { get; }
```

7 Summary

8 Gets a System.Boolean value indicating whether the property reflected by the current
9 instance has a Set accessor.

10 Property Value

11 true if the property reflected by the current instance has a Set accessor; otherwise,
12 false.

13 Behaviors

14 This property is read-only.

15

16

1 PropertyInfo.PropertyType Property

```
2 [ILAsm]  
3 .property class System.Type PropertyType { public hidebysig virtual  
4 abstract specialname class System.Type get_PropertyType() }  
5 [C#]  
6 public abstract Type PropertyType { get; }
```

7 Summary

8 Gets the type of the property reflected by the current instance.

9 Property Value

10 A `System.Type` that represents the type of the property reflected by the current
11 instance.

12 Behaviors

13 This property is read-only.

14

15
