

1 System.UnhandledExceptionEventArgs Class

```
2 [ILAsm]  
3 .class public serializable UnhandledExceptionEventArgs extends  
4 System.EventArgs  
  
5 [C#]  
6 public class UnhandledExceptionEventArgs: EventArgs
```

7 Assembly Info:

- 8 • *Name:* mscorlib
- 9 • *Public Key:* [00 00 00 00 00 00 00 00 04 00 00 00 00 00 00]
- 10 • *Version:* 2.0.x.x
- 11 • *Attributes:*
 - 12 ○ CLSCompliantAttribute(true)

13 Summary

14 Provides data for the event that is raised when an exception is not caught by the
15 program code executing in an application domain.

16 Inherits From: System.EventArgs

17

18 **Library:** RuntimeInfrastructure

19

20 **Thread Safety:** All public static members of this type are safe for multithreaded operations.
21 No instance members are guaranteed to be thread safe.

22

23 Description

24 System.UnhandledExceptionEventArgs provides access to the uncaught
25 System.Exception and a property indicating whether the system will terminate the
26 current process.

27

1
2 **UnhandledExceptionEventArgs(System.Object**
3 **, System.Boolean) Constructor**

```
4 [ILAsm]  
5 public rtspecialname specialname instance void .ctor(object exception,  
6 bool isTerminating)  
7 [C#]  
8 public UnhandledExceptionEventArgs(object exception, bool isTerminating)
```

9 **Summary**

10 Constructs and initializes a new instance of the `System.UnhandledExceptionEventArgs`
11 class.

12 **Parameters**

Parameter	Description
<i>exception</i>	The exception that was not caught.
<i>isTerminating</i>	true if the system will terminate the current process; otherwise, false.

13
14 **Description**

15 This constructor initializes the
16 `System.UnhandledExceptionEventArgs.ExceptionObject` property using *exception*,
17 and the `System.UnhandledExceptionEventArgs.IsTerminating` property using
18 *isTerminating*.

19

1
2 **UnhandledExceptionEventArgs.ExceptionObject Property**
3

```
4 [ILAsm]  
5 .property object ExceptionObject { public hidebysig specialname instance  
6 object get_ExceptionObject() }  
7 [C#]  
8 public object ExceptionObject { get; }
```

9 **Summary**

10 Gets the uncaught exception.

11 **Property Value**

12 A `System.Object`, typically a `System.Exception`, that is the cause of the current event.

13 **Description**

14 This property is read-only.

15

1 UnhandledExceptionEventArgs.IsTerminating 2 Property

```
3 [ILAsm]  
4 .property bool IsTerminating { public hidebysig specialname instance bool  
5 get_IsTerminating() }  
  
6 [C#]  
7 public bool IsTerminating { get; }
```

8 Summary

9 Gets a `System.Boolean` value indicating whether the system is terminating the current
10 process.

11 Property Value

12 `true` if the system will end the current process as a result of the current unhandled
13 exception; otherwise, `false`.

14 Description

15 This property is read-only.

16
17 [*Note:* This property returns `true` when an exception is received in, but not handled by,
18 an application's main thread. This property also returns `true` if an unmanaged thread is
19 executing managed code and receives an unhandled exception.

20 `System.UnhandledExceptionEventArgs.IsTerminating` returns `false` for managed
21 threads created by an application, and for unhandled exceptions thrown during object
22 finalization.]
