

1 System.IO.StringWriter Class

```
2 [ILAsm]  
3 .class public serializable StringWriter extends System.IO.TextWriter  
4 [C#]  
5 public class StringWriter: TextWriter
```

6 Assembly Info:

- 7 • *Name:* mscorlib
- 8 • *Public Key:* [00 00 00 00 00 00 00 00 04 00 00 00 00 00 00 00]
- 9 • *Version:* 2.0.x.x
- 10 • *Attributes:*
 - 11 ○ CLSCompliantAttribute(true)

12 Implements:

- 13 • **System.IDisposable**

14 Summary

15 Implements a `System.IO.TextWriter` that writes information to a string.

16 Inherits From: System.IO.TextWriter

17

18 **Library:** BCL

19

20 **Thread Safety:** All public static members of this type are safe for multithreaded operations.

21 No instance members are guaranteed to be thread safe.

22

1 StreamWriter() Constructor

```
2 [ILAsm]  
3 public rtspecialname specialname instance void .ctor()  
4 [C#]  
5 public StreamWriter()
```

6 Summary

7 Constructs and initializes a new instance of the `System.IO.StringWriter` class.

8 Description

9 A new `System.Text.StringBuilder` is automatically created and associated with the
10 new `System.IO.StringWriter` instance.

11

1 StreamWriter(System.IFormatProvider)

2 Constructor

```
3 [ILAsm]  
4 public rtspecialname specialname instance void .ctor(class  
5 System.IFormatProvider formatProvider)  
  
6 [C#]  
7 public StreamWriter(IFormatProvider formatProvider)
```

8 Summary

9 Constructs and initializes a new instance of the System.IO.StringWriter class with the
10 specified format provider.

11 Parameters

Parameter	Description
<i>formatProvider</i>	A System.IFormatProvider object that defines formatting.

12

13

1 **StringWriter(System.Text.StringBuilder)**

2 **Constructor**

```
3 [ILAsm]  
4 public rtspecialname specialname instance void .ctor(class  
5 System.Text.StringBuilder sb)  
  
6 [C#]  
7 public StringWriter(StringBuilder sb)
```

8 **Summary**

9 Constructs and initializes a new instance of the System.IO.StringWriter class that
10 writes to the specified System.Text.StringBuilder.

11 **Parameters**

Parameter	Description
<i>sb</i>	The System.Text.StringBuilder to write to.

12 **Exceptions**

Exception	Condition
System.ArgumentNullException	<i>sb</i> is null.

14
15

1 **StringWriter(System.Text.StringBuilder,** 2 **System.IFormatProvider) Constructor**

```
3 [ILAsm]  
4 public rtspecialname specialname instance void .ctor(class  
5 System.Text.StringBuilder sb, class System.IFormatProvider formatProvider)  
  
6 [C#]  
7 public StringWriter(StringBuilder sb, IFormatProvider formatProvider)
```

8 **Summary**

9 Constructs and initializes a new instance of the `System.IO.StringWriter` class that
10 writes to the specified `System.Text.StringBuilder` and has the specified format
11 provider.

12 **Parameters**

Parameter	Description
<i>sb</i>	The <code>System.Text.StringBuilder</code> to write to.
<i>formatProvider</i>	A <code>System.IFormatProvider</code> object that defines formatting.

13

14 **Exceptions**

Exception	Condition
System.ArgumentNullException	<i>sb</i> is null.

15

16

1 StreamWriter.Close() Method

```
2 [ILAsm]  
3 .method public hidebysig virtual void Close()  
4 [C#]  
5 public override void Close()
```

6 Summary

7 Closes the current System.IO.StringWriter instance.

8 Description

9 *[Note: This version of System.IO.StringWriter.Close is equivalent to*
10 *System.IO.StringWriter.Dispose(true).*

11
12 This method overrides System.IO.Stream.Close.

13
14]

15

1 `StringWriter.Dispose(System.Boolean)`

2 Method

```
3 [ILAsm]  
4 .method family hidebysig virtual void Dispose(bool disposing)  
5 [C#]  
6 protected override void Dispose(bool disposing)
```

7 Summary

8 Releases the unmanaged resources used by the `System.IO.StringWriter` and
9 optionally releases the managed resources.

10 Parameters

Parameter	Description
<i>disposing</i>	true to release both managed and unmanaged resources; false to release only unmanaged resources.

11 12 Description

13 When the *disposing* parameter is true, this method releases all resources held by any
14 managed objects that this `System.IO.StringWriter` references. This method invokes
15 the `Dispose()` method of each referenced object.

16
17 [Note: `System.IO.StringWriter.Dispose` can be called multiple times by other objects.
18 When overriding `System.IO.StringWriter.Dispose(System.Boolean)`, be careful not
19 to reference objects that have been previously disposed in an earlier call to
20 `System.IO.StringWriter.Dispose.`]

21
22

23

1 **StringWriter.GetStringBuilder()** Method

```
2 [ILAsm]  
3 .method public hidebysig virtual class System.Text.StringBuilder  
4 GetStringBuilder()  
  
5 [C#]  
6 public virtual StringBuilder GetStringBuilder()
```

7 **Summary**

8 Returns the underlying `System.Text.StringBuilder`.

9 **Return Value**

10 The underlying `System.Text.StringBuilder`.

11 **Description**

12 This method returns either the `System.Text.StringBuilder` that was passed to the
13 constructor, or the `System.Text.StringBuilder` that was automatically created.

14 **Behaviors**

15 As described above.

16

17

1 **StringWriter.ToString() Method**

```
2 [ILAsm]  
3 .method public hidebysig virtual string ToString()  
4 [C#]  
5 public override string ToString()
```

6 **Summary**

7 Returns a string containing the characters written to the current
8 System.IO.StringWriter instance so far.

9 **Return Value**

10 The System.String containing the characters written to the current
11 System.IO.StringWriter instance.

12 **Description**

13 [*Note:* This method overrides System.Object.ToString.]
14
15

16

1 StreamWriter.Write(System.String) Method

```
2 [ILAsm]  
3 .method public hidebysig virtual void Write(string value)  
4 [C#]  
5 public override void Write(string value)
```

6 Summary

7 Writes a string to the current instance of the `System.IO.StringWriter`.

8 Parameters

Parameter	Description
<i>value</i>	The <code>System.String</code> to write. If <i>value</i> is null, nothing is written.

9 10 Description

11 [Note: This method overrides `System.IO.TextWriter.Write`.]
12
13

14 Exceptions

Exception	Condition
System.ObjectDisposedException	The writer is closed.

15
16

1 `StringWriter.Write(System.Char[],` 2 `System.Int32, System.Int32)` Method

```
3 [ILAsm]  
4 .method public hidebysig virtual void Write(class System.Char[] buffer,  
5 int32 index, int32 count)  
  
6 [C#]  
7 public override void Write(char[] buffer, int index, int count)
```

8 Summary

9 Writes the specified region of a character array to this instance of the
10 `System.IO.StringWriter`.

11 Parameters

Parameter	Description
<i>buffer</i>	The <code>System.Char</code> array to read data from.
<i>index</i>	A <code>System.Int32</code> that specifies the index at which to begin reading from <i>buffer</i> .
<i>count</i>	A <code>System.Int32</code> that specifies the maximum number of characters to write.

12 13 Description

14 [Note: This method overrides `System.IO.TextWriter.Write`.]
15
16

17 Exceptions

Exception	Condition
System.ArgumentNullException	<i>buffer</i> is null.
System.ArgumentOutOfRangeException	<i>index</i> < 0 -or- <i>count</i> < zero.
System.ArgumentException	$(index + count) > buffer.Length$.

System.ObjectDisposedException

The writer is closed.

1

2

1 StreamWriter.Write(System.Char) Method

```
2 [ILAsm]  
3 .method public hidebysig virtual void Write(valuetype System.Char value)  
4 [C#]  
5 public override void Write(char value)
```

6 Summary

7 Writes a character to the current instance of the System.IO.StringWriter.

8 Parameters

Parameter	Description
<i>value</i>	The System.Char to write.

9

10 Description

11 [Note: This method overrides System.IO.TextWriter.Write.]

12

13

14 Exceptions

Exception	Condition
System.ObjectDisposedException	The writer is closed.

15

16

1 **StringWriter.Encoding Property**

```
2 [ILAsm]  
3 .property class System.Text.Encoding Encoding { public hidebysig virtual  
4 specialname class System.Text.Encoding get_Encoding() }  
5 [C#]  
6 public override Encoding Encoding { get; }
```

7 **Summary**

8 Gets the `System.Text.Encoding` in which the output is written.

9 **Property Value**

10 The `System.Text.Encoding` in which the output is written.

11 **Behaviors**

12 As described above.

13

14 **Usage**

15 This property is required in some XML scenarios where a header must be written
16 containing the encoding used by the `System.IO.StringWriter`. This allows XML code to
17 consume an arbitrary `System.IO.StringWriter` and generate a correct XML header.

18

19
