

System.Runtime.CompilerServices.TypeForwardedFromAttribute Class

```
[ILAsm]
.class public sealed beforefieldinit TypeForwardedFromAttribute

[C#]
public sealed class TypeForwardedFromAttribute: Attribute
```

Assembly Info:

- *Name:* mscorlib
- *Public Key:* [00 00 00 00 00 00 00 00 04 00 00 00 00 00 00 00]
- *Version:* 4.0.0.0
- *Attributes:*
 - CLSCompliantAttribute(true)

Type Attributes:

- System.AttributeUsage(System.AttributeTargets.Class | System.AttributeTargets.Struct | System.AttributeTargets.Enum | System.AttributeTargets.Interface | System.AttributeTargets.Delegate | System.AttributeTargets.All, AllowMultiple=false, Inherited=false)

Summary

Specifies a source `System.Type` in another assembly.

Inherits From: System.Attribute

Library: RuntimeInfrastructure

Description

The `System.Runtime.CompilerServices.TypeForwardedFromAttribute` attribute enables the target framework provider to trace a loaded type back to the original assembly it was forwarded from.

1 TypeForwardedFromAttribute(System.String) 2 Constructor

```
3 [ILAsm]  
4 .method public hidebysig specialname rtspecialname instance void  
5 .ctor(string assemblyFullName) cil managed  
  
6 [C#]  
7 public TypeForwardedFromAttribute (string assemblyFullName)
```

8 Summary

9 Initializes a new instance of the
10 System.Runtime.CompilerServices.TypeForwardedFromAttribute class.

11 Parameters

Parameter	Description
<i>assemblyFullName</i>	The source System.Type in another assembly.

12

13 Exceptions

Exception	Condition
System.ArgumentNullException	<i>assemblyFullName</i> is null or empty.
