## 17 Summary

18 Used to declaratively specify permission to request information from Domain Name  
19 Servers.

## 20 Inherits From: System.Security.Permissions.CodeAccessSecurityAttribute

21 **Library:** Networking

22  
23  
24 **Thread Safety:** All public static members of this type are safe for multithreaded operations.  
25 No instance members are guaranteed to be thread safe.

## 26 Description

27  
28 [*Note:* The security information declared by a security attribute is stored in the  
29 metadata of the attribute target, and is accessed by the system at run-time. Security  
30 attributes are used for declarative security only. For imperative security, use the  
31 corresponding permission class, `System.Net.DnsPermission`.  
32

33 The allowable `System.Net.DnsPermissionAttribute` targets are determined by the  
34 `System.Security.Permissions.SecurityAction` passed to the constructor.

# 1 DnsPermissionAttribute.CreatePermission() 2 Method

```
3 [ILAsm]  
4 .method public hidebysig virtual class System.Security.IPermission  
5 CreatePermission()  
  
6 [C#]  
7 public override IPermission CreatePermission()
```

## 8 Summary

9 Returns a `System.Net.DnsPermission` instance that contains the security information of  
10 the current instance.

## 11 Return Value

12 A `System.Net.DnsPermission` object with the security information of the current  
13 instance.

## 14 Description

15 [*Note:* Applications typically do not call this method; it is intended for use by the  
16 system.

17  
18 The security information described by a security attribute is stored in the metadata of  
19 the attribute target, and is accessed by the system at run-time. The system uses the  
20 object returned by this method to convert the security information of the current  
21 instance into the form stored in metadata.

22  
23 This method overrides  
24 `System.Security.Permissions.SecurityAttribute.CreatePermission`.
